IWC DATABASE GUIDELINES

To standardise the creation of databases, repositories, catalogues and applications, the following guidelines should be adhered to.

Version 2017.05

- All new scientific database requests must be submitted to the scientific committee for discussion, approval, prioritisation and funding. This must be submitted using a database proforma **after** being discussed by the relevant sub-committee
- All agreed development work will be overseen by the IWC Secretariat, and the Committee where specific input is needed
- Where possible, all databases must use open source software
- Programming languages, database engines and other technologies used must be discussed and agreed with IWC Secretariat to minimise development, infrastructure and maintenance costs
- All completed source code and database schemas must be provided to and held by the IWC Secretariat
- All databases will have a 5-year review cycle to ensure code and databases are kept up-to-date and secure
- Where appropriate, new databases should be developed in a way that will allow expansion and interaction from other databases and applications. This is to be discussed with the IWC Secretariat
- Where user accounts are required, they should be authenticated by a central IWC authentication server to minimise login credentials for users of multiple databases
