Key: SW=small type whaling; D=drive fishery; H=hand harpoon fishery. Year for quota is for each season, actual catch is for calendar year. If number includes live capture, the number of live captures is given in brackets – e.g. 41(2) means 41 whales were caught of which 2 were live capture. **For Baird's beaked whale, carryover is permitted. Where quota is given as x+y (e.g. 66+10) the second number is the carryover from the previous season. \$Small type quota was 33 of which 2 were caught. The remaining 31 were transferred to the drive/hand harpoon fishery quota giving a drive/hand harpoon quota of 135+31=166. Thus, the total quota was 168 (=2+31+135). \$\$There were no captures out of small type quota of 33. The 33 were transferred to the drive/hand harpoon fishery quota giving a drive/hand harpoon quota of 127+33=160.

^The Pacific white-sided dolphin quota was established in the 2007/08 season (see Progress Report on small cetacean research, JFA, 2008/09).
