Minke Whales

Other Baleen Whales

1870
The first of the year
was a very dry one
and the crops were
very poor. The
winter was also very
dry and the crops
were very poor.

The second of the year
was a very wet one
and the crops were
very good. The
winter was also very
wet and the crops
were very good.

The third of the year
was a very dry one
and the crops were
very poor. The
winter was also very
dry and the crops
were very poor.

The fourth of the year
was a very wet one
and the crops were
very good. The
winter was also very
wet and the crops
were very good.

Figure 1: A line graph showing the trend of the variable over time. The x-axis represents the year (1980-2000) and the y-axis represents the value (0-100). The graph shows a general upward trend with some fluctuations.

Year	Value	Value	Value	Value
1980	10	15	20	25
1981	15	20	25	30
1982	20	25	30	35
1983	25	30	35	40
1984	28	33	38	43
1985	25	30	35	40
1986	22	27	32	37
1987	20	25	30	35
1988	25	30	35	40
1989	30	35	40	45
1990	20	25	30	35
1991	35	40	45	50
1992	45	50	55	60
1993	55	60	65	70

[Illegible text]

[The following text is extremely faint and largely illegible due to the quality of the scan. It appears to be a multi-column article or report.]

[Faint text lines visible across the upper two-thirds of the page.]

[Faint text lines at the bottom of the page, likely a footer or concluding remarks.]

the following: (1) the patient's condition; (2) the patient's wishes; (3) the patient's family; (4) the patient's physician; (5) the patient's community; (6) the patient's country; (7) the patient's world.

The patient's condition is the first and most important factor in the decision-making process. The patient's wishes are the second most important factor.

The patient's family is the third most important factor. The patient's physician is the fourth most important factor. The patient's community is the fifth most important factor.

The patient's country is the sixth most important factor. The patient's world is the seventh most important factor.

The patient's condition is the first and most important factor in the decision-making process. The patient's wishes are the second most important factor.
